## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1, 4-9, 10, 19, 58, 68, 78, 96-116 & 140-169, drawn to a method for identifying a chronic alcoholic/binge drinker, classified in class 436, subclass 132.
  - II. Claims 28, 29, 31, 35, 45, 95 and 117-139, drawn to a method for determining ethanol intake, classified in class 436, subclass 132.
  - III. Claims 88 & 170-175, drawn to a computer program product, classified in class 702, subclass 23.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have different functions because the method of determining ethanol intake can be used on non-human subjects and the method of determining a chronic alcoholic is limited to human subjects.
3. Inventions Group I and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have

Art Unit: 1743

different functions because the latter is determining ethanol intake and the other is concerned with making a clinical diagnosis of alcoholism.

4. Inventions Group II and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have different modes of operation because the method of determining ethanol intake does not have to be performed using the claimed computerized program product.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Janice Vatland on November 13, 20003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
